

InfraStudio

Design. Compare. Deploy.

Cloud Infrastructure Command Centre

Design, compare, and deploy cloud infrastructure from one unified platform

Rohit Darekar | AIT Global Inc **Amol Funde** | AIT Global Inc

Vijay Kadam | AIT Global Inc

Team Name: **The Orchestrators**

Presentation Roadmap

Nine modules across three phases — Overview, Features, and Operations.

OVERVIEW

1

Platform Introduction

2

Key Capabilities

3

Problem, Solution & ROI

FEATURES

4

Terraform Builder

5

Cost Intelligence

6

Direct Deploy

OPERATIONS

7

Compute Optimizer

8

Monitoring & Analytics

9

Operations Suite

Problem, Solution & ROI

THE CHALLENGE

1

Disconnected Tooling

7+ tools per workflow — terminal, Docker, Grafana, CI/CD. Each switch costs 20-25 min of focus.

2

Manual IaC Authoring

Writing Terraform from scratch takes hours and requires specialist knowledge most teams lack.

3

Zero Cost Visibility

No single place to compare AWS, Azure and GCP costs before provisioning resources at scale.

THE SOLUTION

One platform. Every cloud tool.

InfraStudio unifies IaC design, cost analysis, live deploy, monitoring, and AI automation in a single browser-based workspace.

THE PAYOFF

30-40%

Engineering time freed from toil

< 5 min

From idea to deployed IaC

75-80%

Cloud savings identified

Key Capabilities

Ten integrated modules covering every stage of the infrastructure lifecycle.

Terraform Builder

Visual HCL for AWS, Azure & GCP

Cost Comparison

Live multi-cloud pricing & savings

K8s Costing

K8s cost explorer with diagrams

Direct Deploy

Git → K8s, Render, Fly.io

Compute Optimizer

AI-powered right-sizing

Monitoring

Health, drift & compliance

Analytics

Usage trends & cost insights

Ansible

Visual playbook builder

Crossplane

K8s-native cloud resources

Operations Suite

AI Agents, vault & schedules

Terraform Builder

Visual drag-and-drop HCL generation — no Terraform expertise required.

BY THE NUMBERS

Visual Canvas

Drag-and-drop resource blocks with live connection mapping and dependency resolution.

Multi-Cloud

Full AWS, Azure & GCP provider support with 50+ resource types across all services.

HCL Export

Download production-ready formatted Terraform files in one click, ready to apply.

Plan Preview

Real-time plan preview showing resource changes before committing to infrastructure.

Module Support

Reusable modules with variable injection and environment-specific configuration.

3

Cloud Providers

50+

Resource Types

HCL

Output Format

0

Vendor Lock-in

Cost Intelligence Suite

Two powerful modules to compare, plan, and optimise your cloud spend before you commit.

Cost Comparison

- Real-time pricing APIs from AWS, Azure & GCP
- Drag-and-drop multi-cloud service comparison
- On-prem vs cloud total cost modelling
- Savings recommendations with exact percentages
- PDF / CSV cost comparison report exports

K8s Costing Explorer

- Configure CPU, memory, replicas & storage per workload
- Auto-generate Kubernetes architecture diagrams
- Per-cloud cost breakdown for EKS, GKE & AKS
- Terraform download for complete K8s cluster setup
- Side-by-side cluster cost comparison across providers

Direct Deploy

From any Git repository to live cloud infrastructure — five steps, no CI/CD setup required.

Optimise & Monitor

COMPUTE OPTIMIZER *Lead right-sizing and real-time infrastructure health across all cloud providers.*

Right-Sizing

AI recommendations to up/downgrade instances based on actual CPU and RAM utilisation

Cost Impact

See the exact monthly saving amount before making any changes to your fleet

Utilisation Sim

Simulate CPU / RAM metrics to safely test right-sizing scenarios

Multi-Cloud Compare

Compare equivalent instance types across AWS, Azure and GCP side-by-side

MONITORING

Health Checks

Real-time infrastructure health with live utilisation metrics per resource

Drift Detection

IaC drift detection and automated compliance scanning across your stack

Incident Tracking

Alert management with severity levels, escalation paths and history log

Trend Analysis

Resource usage trend analysis and monthly cost forecasting dashboards

Operations Suite

Orchestrate, automate, and secure your infrastructure with the built-in Oz platform.

AI Agents

Launch intelligent agents to provision, migrate, or audit infrastructure autonomously. Monitor execution logs in real time.

Auto-provision

Live logs

Multi-step tasks

Server Registry

Register and manage SSH and Docker hosts as deployment targets. Agents connect securely via stored credentials.

SSH targets

Docker hosts

Health checks

Secrets Vault

Store cloud credentials, SSH keys and API tokens encrypted at rest with AES-256. Inject securely into agent runs.

AES-256 encrypt

Zero exposure

Scoped access

Schedules

Define cron triggers for recurring agent jobs: nightly backups, compliance scans, cost reports, drift detection.

Cron syntax

Retry logic

Full run history

Thank You!
