INFRASTUDIO

InfraStudio

Cloud Infrastructure Command Centre

Design, compare, and deploy cloud infrastructure from one unified platform

Rohit Darekar | AIT Global Inc **Amol Funde** | AIT Global Inc

Vijay Kadam | AIT Global Inc

Team Name: **The Orchestrators**

Presentation Roadmap

Nine modules across three phases — Overview, Features, and Operations.

OVERVIEW

1

Platform Introduction

2

Key Capabilities

3

Problem, Solution & ROI

FEATURES

4

Terraform Builder

5

Cost Intelligence

6

Direct Deploy

OPERATIONS

7

Compute Optimizer

8

Monitoring & Analytics

9

Operations Suite

Problem, Solution & ROI

THE PROBLEM

1

Disconnected Tooling

7+ tools per workflow — terminal, Docker, Grafana, CI/CD. Each switch costs 20-25 min of focus.

2

Manual IaC Authoring

Writing Terraform from scratch takes hours and requires specialist knowledge most teams lack.

3

Zero Cost Visibility

No single place to compare AWS, Azure and GCP costs before provisioning resources at scale.

THE SOLUTION

One platform. Every cloud tool.

InfraStudio unifies IaC design, cost analysis, live deploy, monitoring, and AI automation in a single browser-based workspace.

THE PAYOFF

30-40%

of eng. time freed from toil

< 5 min

idea to deployed IaC

75-80%

cost savings identified

Key Capabilities

Ten integrated modules covering every stage of the infrastructure lifecycle.

Terraform Builder

Visual HCL generation for AWS, Azure & GCP

Cost Comparison

Live multi-cloud pricing & savings recommendations

K8s Costing

Kubernetes cost explorer with architecture diagrams

Direct Deploy

Git repo to K8s, Render, Railway, Fly.io in steps

Compute Optimizer

AI-powered right-sizing with cost impact analysis

Monitoring

Real-time health, drift detection & incidents

Analytics

Usage trends, cost breakdowns, team insights

Ansible

Visual playbook builder for config management

Crossplane

Kubernetes-native cloud resource management

Operations Suite

AI Agents, secrets vault, servers & schedules

Terraform Builder

Visual drag-and-drop HCL infrastructure generation — no Terraform expertise required.

Visual Canvas

Drag-and-drop resource blocks with live connection mapping and dependency resolution.

Multi-Cloud

Full AWS, Azure & GCP provider support with 50+ resource types across all services.

HCL Export

Download production-ready, formatted Terraform files in one click, ready to apply.

Plan Preview

Real-time plan preview showing resource changes before committing to infrastructure.

Module Support

Reusable modules with variable injection and environment-specific configuration.

BY THE NUMBERS

3

Cloud Providers

50+

Resource Types

HCL

Output Format

Zero

Vendor Lock-in

Cost Intelligence Suite

Two powerful modules to compare, plan, and optimise cloud spend before you commit.

Cost Comparison

- Real-time pricing APIs from AWS, Azure & GCP
- Drag-and-drop multi-cloud service comparison
- On-prem vs cloud total cost modelling
- Savings recommendations with exact percentages
- PDF/CSV cost comparison report exports

K8s Costing Explorer

- Configure CPU, memory, replicas & storage per workload
- Auto-generate Kubernetes architecture diagrams
- Per-cloud cost breakdown for EKS, GKE & AKS
- Terraform download for complete K8s cluster setup
- Side-by-side cluster cost comparison across providers

Direct Deploy

From any Git repository to live cloud infrastructure — five steps, no CI/CD setup required.

SUPPORTED DEPLOYMENT TARGETS

Optimise & Monitor

AI-powered right-sizing and real-time infrastructure health across all cloud providers.

COMPUTE OPTIMIZER

Right-Sizing

AI recommendations to up/downgrade instances based on actual CPU and RAM utilisation

Cost Impact

See the exact monthly saving amount before making any changes to your fleet

Utilisation Simulation

Simulate CPU / RAM metrics to safely test right-sizing scenarios

Multi-Cloud Compare

Compare equivalent instance types across AWS, Azure and GCP side-by-side

MONITORING

Health Checks

Real-time infrastructure health with live utilisation metrics per resource

Drift Detection

IaC drift detection and automated compliance scanning across your stack

Incident Tracking

Alert management with severity levels, escalation paths and history log

Trend Analysis

Resource usage trend analysis and monthly cost forecasting dashboards

Orchestrate, automate, and secure your infrastructure with the built-in Oz platform.

AI Agents

Launch intelligent agents to provision, migrate, or audit infrastructure autonomously. Monitor execution logs in real time.

Auto-provision

Live logs

Multi-step tasks

Secrets Vault

Store cloud credentials, SSH keys and API tokens encrypted at rest with AES-256. Inject securely into agent runs.

AES-256 encrypt

Zero exposure

Scoped access

Server Registry

Register and manage SSH and Docker hosts as deployment targets. Agents connect securely via stored credentials.

SSH targets

Docker hosts

Health checks

Schedules

Define cron triggers for recurring agent jobs: nightly backups, compliance scans, cost reports, drift detection.

Cron syntax

Retry logic

Full run history

Implementation Plan & Budget

Phased delivery roadmap and flexible subscription tiers for every team size.

ROADMAP

M1-M3

Foundation

Core IaC tools live, public beta, first 50 users onboarded

M3-M6

Growth

Pro tier + Stripe billing, AI optimizer GA, 100 paying customers

M6-M9

Scale

Team tier + SSO, operations suite GA, 500 customers, marketplace

M9-M12

Enterprise

Enterprise pilots, custom agent integrations, SLA commitments

PRICING

Starter

Free

Core IaC tools · Basic cost compare · Community support

Pro

\$29/mo

Live pricing APIs · AI optimisation · Priority support

Team

\$99/mo

SSO · Team audit logs · Shared secrets vault · SLA

Enterprise

Custom

Custom agents · Dedicated infra · White-label options
